

# Creating variants

What is a product variant?

A product variant is a variety of one product, such as a T-shirt can have a color and size, a red "L" size T-shirt is one option. Each option can have its own price and balances.

For example a t-shirt:

Blue color, size "S" - the rest is 2 pieces, the price is \$10.

Red color, size "L" - the rest is 1 piece, the price is \$15.

Product options can be any, for example, the product "mineral water" can have 2 options:

By the piece - the price is \$2.

Box - price \$30.

How to create a variant?

To create options in the form of a product, go to the "Variants and properties" tab. Click on the "Create Variants" button.

The screenshot displays the product management interface for "Battery Case Odoyo Power+Shell for iPhone 6/6S". The interface includes a sidebar on the left with navigation options: Home, Orders, Catalog, Products (highlighted), Categories, Import, Commodity groups, Labels, Manufacturers, Collections, and Inventory. The main panel has three tabs: General, Variants and options (highlighted), and Additionally. The Variants and options tab is active, showing a "Create variants" button. Below this button are sections for "Weight and Dimensions" (Weight: 0,3 kg, Width, Height, Length), "Commodity group" (Cases for mobile phones), and "Case characteristics" (Is Charging Case?). The "Save" button is visible in the Commodity group section.

In the upper part of the window that opens, the characteristics of the commodity group that were created earlier will be indicated. You can create variants based on them or add your own characteristics.

Specify characteristics to create variants
