

Editing a variant

To edit a variant, go to the “Variants and properties” tab.

Click on the “Edit” button next to the required option or on the name of the characteristics on the basis of which the option was created.

The screenshot shows the 'Case Gray' product page with the 'Variants and options' tab selected. A red arrow points to the 'Variants and options' tab, and another red arrow points to the 'Edit' button for the 'iPad Air 2/ Air' variant. The table below shows the variants and their details.

	For iPad	Price	Stock	SKU
<input type="checkbox"/>	iPad Air 2/ Air	14.99 \$ 16.00 \$	8 Reserved: 2	ipad-case-gray-iPad Air 2/ Air
<input type="checkbox"/>	iPad mini 3/ mini 2/ mini	14.99 \$ 16.00 \$	10	ipad-case-gray-iPad mini 3/ mini 2/ mini
<input type="checkbox"/>	iPad 4/ 3/ 2	14.99 \$ 16.00 \$	10	ipad-case-gray-iPad 4/ 3/ 2

You can change the following data for a variant:

- Vendor code;
- Selling price;
- Old price;
- Purchase price;
- Remains;
- Weight and dimensions.

If weight or dimensions are specified for the variant, then the weight and dimensions of the variant will override the weight and dimensions of the product. For example, you sell shampoo, which is presented in two versions: 1 liter and 5 liters. These options have different weights, so you need to set it for each option.

If the weight of the variants is the same, for example, T-shirts presented in different colors, then it is enough to specify the weight for the product (not for the variant).

Correct weight and dimensions are needed for automatic calculation of shipping costs.

Prices (fields “Sale price”, “Old price”, “Purchase price”) can be set for several variants at once.
How to set mass prices can be found at the [link](#).

You can also set mass the stocks, you can read how to do this at the [link](#).
