

SEO templates

In order not to prescribe a Title and Description for each product or category, an auto-generation template is created. The template consists of variables and text.

To set an SEO template, go to the “Meta & SEO” section in the SEO Templates tab.

In the tab, you can fill in the Title and Description for both the product and the product category:

The screenshot shows the 'SEO templates' section of the BOUNDLLESS commerce dashboard. The left sidebar contains navigation links: Home, Orders, Catalog, Inventory, Customers, Discounts, Settings, My account, Locale, Catalog filter sets, SEO templates (highlighted with a red box), and Email settings. The main content area is titled 'SEO templates' and features a sub-tab 'SEO templates' (also highlighted with a red box). Below this, there are three sections for editing templates: 1. 'Product page' with a title template 'Buy a cheap {{title}}. Fast worldwide shipping!' and a description template 'Buy {{title}}, {{sku}}, from {{price}} Fast worldwide shipping!{{shortDescription}}'. 2. 'Category page' with a title template '{{title}} - buy online with free shipping'. Each section includes a 'Template' text area and a 'Preview' box.

You can also access the template editing from the product card.

The Sellios constructor uses a very flexible template builder that allows you to generate dynamic texts for meta tags depending on boolean variables, as well as use if conditions and loops.

Mustache.js is used as a template engine, you can read more about the template language here:

<https://github.com/janl/mustache.js>.

The following variables are available for compiling a product SEO template:

{{id}} - product ID

{{title}} - product name

{{sku}} - product SKU

{{skuVariants}} - articles of variants separated by commas (if the product has variants)

{{category}} - main product category

{{manufacturer}} - manufacturer

{{price}} - price

{{labels}} - labels separated by commas

{{description}} - product description (html tags are removed beforehand)

{{shortdescription}} - short description: obtained by shortening the description to 100 characters (html tags are also removed beforehand)

{{inStock}} - product availability, true/false value

{{hasVariants}} - whether the product has variants true/false

{{variants}} - array with options (if any).

The following variables are available for compiling a category **SEO template**:

{{id}} - product ID

{{parentId}} - parent ID

{{title}} - category title

{{topDescription}} - category description

{{bottomDescription}} - bottom description (under products)

{{shortTopDescription}} - category description shortened to 100 characters

{{shortBottomDescription}} - bottom description truncated to 100 characters

Examples of compiling SEO templates

Example 1: You can use the product name and price if you want to compete on price. In this case, we use two variables: {{title}} and {{price}}.

To do this, in the Title Template field, you can enter the following:

Buy {{title}} at the best price from {{price}}

SEO templates

SEO templates

Product page

<title>

Template

Buy {{title}} at the best price from {{price}}

Preview

Buy Laptop MacBook Pro 15 at the best price from 1,999.00 \$

<meta name="Description">

Template

Buy {{title}}, {{sku}}, from {{price}} Fast worldwide shipping!{{shortDescription}}

Preview

Buy Laptop MacBook Pro 15, MCB-Pro-15, from 1,999.00 \$ Fast worldwide shipping!Laptop MacBook Pro 15 - Lorem ipsum dolor sit amet, consectetur adipiscing elit. Integer a posuere a...

Example 2. You can use the name of the product and manufacturer. In this case, the variables {{title}} and {{manufacturer}} are used.

To do this, in the Title Template field, you can enter the following:

Buy `{{title}}` by `{{manufacturer}}`

SEO templates

SEO templates

Product page

`<title>`

Template

Buy `{{title}}` by `{{manufacturer}}`

Preview

Buy Laptop MacBook Pro 15 by Apple

`<meta name="Description">`

Example 3: In the case of using labels to increase sales in an online store, such as "new", "sale", etc., they can be used to create templates. In this case, the variables are used: `{{title}}` and `{{labels}}`. You can also include the `{{price}}` variable to show the price.

The template could be like this:

`{{labels}}`! Buy `{{title}}` at the best prices `{{price}}`

`<meta name="Description">`

Template

`{{labels}}`! Buy `{{title}}` at the best prices `{{price}}`

Preview

New!! Buy Laptop MacBook Pro 15 at the best prices 1,999.00 \$

Example 4. For example, you need to inform your customers that the product is in stock. In this case, we use the `{{instock}}` variable like this:

Buy `{{title}}` at a bargain price. `{{#instock}}` In stock!
`{{/instock}}`

Product page

`<title>`

Template

Buy `{{title}}` at a bargain price. `{{#instock}}` In stock!
`{{/instock}}`

Preview

Buy Laptop MacBook Pro 15 at a bargain price.

For example:

Example 5. For example, you need to inform your customers that the product can be purchased in different versions.

Buy {{title}} {{#hasvariants}} in different variations.{{/hasvariants}}

The text between the variables `{{#hasvariants}}` and `{/hasvariants}}` will only be displayed if the product has variations.

For example:

General

Variants and options

Additionally

[← Products](#)
[Duplicate ↺](#)
[Add to Cart 🛒](#)
[History of changes in stock qty ↻](#)

+

[Create variants](#)

<input type="checkbox"/>	For iphone	Price	Stock	Sku	
<input type="checkbox"/>	iPhone 7	8.50 \$	9 Reserved: 1	iphone-case-cake-iPhone 7	<div>Edit</div> <div>🗑</div>
<input type="checkbox"/>	iPhone 7 plus	8.50 \$	10	iphone-case-cake-iPhone 7 plus	<div>Edit</div> <div>🗑</div>
<input type="checkbox"/>	iPhone 6	8.50 \$	10	iphone-case-cake-iPhone 6	<div>Edit</div> <div>🗑</div>
<input type="checkbox"/>	iPhone 5/5s	8.50 \$	10	iphone-case-cake-iPhone 5/5s	<div>Edit</div> <div>🗑</div>

Example 6. If you want to list product variants in the Description meta tag, this can be done using loops. In this case, we use the `{{variants}}` variable, which stores an array of all options. To iterate over all elements of the options array, use the `{{#variants}} {{/variants}}` construct. Inside this construction, you can use the same variables as for the product, but they will already apply to options.

The template might look like this:

```
Buy {{title}} in various variations: {{#variants}} {{title}}
{{/variants}}
```

<meta name="Description">

Template

```
Buy {{title}} in various variations: {{#variants}} {{title}}
{{/variants}}
```

Preview

```
Buy Laptop MacBook Pro 15 in various variations: MacBook pro 15, 512Gb,
gray MacBook pro 15, 1024Gb, gold
```
